Appl. No.: 10/814,764

Art Unit: 1645

Reply to Office Action of 03/14/2008

Patent 17672 (BOT) 1957205.00041

## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of Claims:

1. (Currently Amended) A method for treating a pressure sore unrelated to contractures or spasticity, wherein said pressure sore is a result of immobility of a <u>patient</u>, the method comprising the step of locally administering a therapeutically effective amount of a botulinum toxin type A to or to the vicinity of a pressure sore of a patient not having contractures or spasticity, wherein the therapeutically effective amount of a botulinum toxin type A is less than an amount that would be used to paralyze a muscle, thereby treating the pressure sore unrelated to contractures or spasticity.

- 2-4. (Cancelled)
- (Original) The method of claim 1, wherein the administration is by topical or subcutaneous administration of the botulinum toxin.
- 6. (Previously Presented) A method for treating a pressure sore unrelated to contractures or spasticity, the method comprising the step of locally administering a therapeutically effective amount of a botulinum toxin type A to a pressure sore or to the vicinity of a pressure sore located at a bottocks area or heel of a patient not having contractures or spasticity, wherein the therapeutically effective amount of a botulinum toxin type A is less than an amount that would be used to paralyze a muscle, thereby treating the pressure sore unrelated to contractures or spasticity by facilitating healing of the pressure sore.

## 7-12. (Cancelled)

13. (Currently Amended) A method for treating a pressure sore unrelated to contractures or spasticity, wherein said pressure sore is a result of immobility of a patient, the method comprises the step of administering a therapeutically effective amount of a botulinum toxin type A to a pressure sore unrelated to contractures or spasticity and debriding the pressure sore, wherein the therapeutically effective amount of a botulinum toxin type A is less than an amount that would be used to paralyze a muscle, thereby treating the pressure sore unrelated to contractures or spasticity.

- 14. (Cancelled) The method of claim 1, wherein the pressure sore is a result of immobility of the patient not having contractures or spasticity.
- 15. (Previously Presented) A method for treating a pressure sore occurring in an area as a result of pressure from lying in bed or sitting in a wheelchair and that is not related to contractures or spasticity, the method comprising the step of locally administering a therapeutically effective amount of a botulinum toxin type A to or to the vicinity of a pressure sore of a patient not having contractures or spasticity, wherein the therapeutically effective amount of a botulinum toxin type A is less than an amount that would be used to paralyze a muscle, thereby treating a pressure sore occurring in an area as a result of pressure from lying in bed or sitting in a wheelchair and that is not related to contractures or spasticity.

16-18. (Cancelled)

- 19. (Previously Presented) The method of claim 15, wherein the administration is by topical or subcutaneaous administration of the botulinum toxin.
- 20. (Cancelled)
- 21. (Previously Presented) The method of claim 1, wherein the botulinum toxin is type A is intradermally administered as about 1 unit/cm<sup>2</sup>.
